

# Carbon Brushes for Industrial and Railway Application

## Physical data of the principal grades

To characterize carbon and graphite materials used for carbon brushes, it is sufficient to state the following material characteristics:

- Specific electrical resistance
- Hardness
- Bending strength and Bulk density

For metal-graphite grades, we additionally state the metal content. All data are average values.

Information on the test methods and equipment is given in IEC Publication 60413, the recommendations of which have been generally adopted.

As an indicator of the running performance of carbon brushes, voltage drop and coefficient of friction can be looked at. These two parameters are, however, affected by numerous environment influences and the operating

conditions, so that they are subject to relatively high fluctuations.

A statement which is generally valid is therefore only possible by stating

ranges, in which experience shows these values to lie.

The following summary shows the ranges selected in each case and the corresponding symbols:

Classification	Symbol	Voltage drop between two carbon brushes connected in series U <sub>ü</sub> (V)	Coefficient of friction $\mu$
Very low	vl	< 1.5	< 0.08
Low	l	1.5 - 2.2	0.08 - 0.15
Medium	m	2.2 - 3.0	0.15 - 0.22
High	h	> 3.0	> 0.22

The grades are classified into the selected ranges on the basis of measurements under test conditions 1 - 7, which are explained in the following table.

On request we are able to supply detailed technical data sheets of our grades, which also contain information regarding other operating conditions.

No.	Current density A/cm <sup>2</sup>	Peripheral speed m/s	Brush pressure cN/cm <sup>2</sup>	Collector temperature °C	Related to the following fields of application of the carbon brushes
1	12	30	250	90	Stationary D.C. machines with and without commutation aids
2	12	50	250	90	Traction motors
3	10	30	200	90	Three-phase commutator motors
4	6	60	160	90	Turbogenerators and turbomotors
5	20	30	200	90	Slip-ring machines and low-voltage machines
6	16	30	200	90	Slip-ring machines and low-voltage machines
7	12	30	200	90	Slip-ring machines and low-voltage machines

## Physical data of the principal grades

Grade	Material type	Voltage drop	Coefficient of friction	Test conditions	Resistivity $\mu\Omega\text{m}$	Rockwell HR 10/40	HR 5/40	Bending strength N/mm <sup>2</sup>	Bulk density g/cm <sup>3</sup>	Metal content %
